## About KJS Tools

KJS-tools specializes in the sale, maintenance and opening of safes and vaults. We are specialized in high-end opening tools for safes, vaults and locks in general.

We like to solve problems and create products that are an added value to the professional safe-technician (and high-end locksmith).

One of the problems we solved is that of transporting heavy safes and vaults. In Europe there was no easy solution to solve this problem. Until now!

The unique KJS 'Safe Transporter' was designed in cooperation with a construction company. The outcome is an easy to use, affordable and secure means of transport .

With 'easy' we mean it is simple to operate. Just one person can load and unload almost anything (the size of a euro pallet). And the device is very maintenance friendly.

With 'affordable' we mean it has got a very attractive purchase price. (see the image below).

With 'secure' we mean it has got a European type approval and is build for heavy duty work. The lightweight construction can handle a 1.500 kg payload.

Besides safes and vaults, it can also be used to transport other heavy objects like: heavy duty pallets , concrete blocks , big sandbags , gravel and other types of building material .As you can imagine there are many other applications imaginable!

These pictures are a example, some small details have to be altered and changed. The final trailer will be galvanized.

**Model : Safe Transporter**  
benefits :

- \* European type approval
